Power That Lasts[™]

Power When You Need It — Where You Need It

Rotating a BHA requires torque, lots of torque.

Extended length power sections, by Dyna-Drill[®] Technologies, provide the torque necessary for rotary steerable systems which require additional RPM.

Installing the motor above the BHA increases bit RPM without generating wear and tear on the drill string.

Include proprietary NBR-HR rubber technology and experience an additional 50% increase in torque.

Extended length power sections are available in Extra Slow Speed (ESX), Slow Speed (SX), and Medium Speed (MX) configurations.
