TECHNOLOGIES

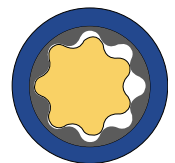

Power That Lasts[™]

Power Sections With Unrivaled Staying Power

Dyna-Drill[®] Technologies power sections have been the products of choice in oil fields throughout the world for nearly half a century and have earned a global reputation for reliable performance and an experienced and knowledgeable support staff.

Dyna-Drill power sections provide superior staying power to sustain long production hours and unrivaled mud motor performance in extreme drilling applications. The high torque, super-slow ESX power sections recently set a world record in the Rocky Mountains by drilling 10,000 feet before requiring a replacement trip.

Dyna-Drill power sections can be teamed with mud motors ranging from 2 7/8" to 11 1/4" in diameter. ESX models are recommended for use with PDC-type drill bits and provide speed ranges from 30 to 80 rpm and high torque ranges from 3,500 to more than 11,000 ft. lbs.

For power sections with unrivaled staying power, the choice is simple —
